

Khabeer Narsai

So just think about the screens so touch screens Okay cool. So the system is going to be a touchscreen

Drita

okay I probably have napkins. Oh

is the product clean. No. (confusion on where to put these items.)

Khabeer Narsai

so this point here that would be associated to a colour at the bottom so bin five and bin number five would light up as well.

Drita

Okay, recycled

I might also have a container

it's not clean

is that it? view the tree

Khabeer Narsai

so thats what would you be seeing on the tree, but because I can show you a tree

Drita

okay

Khabeer Narsai

looking at this like the landing screen and everything. It would make sense.

Drita

Yeah, but it would be better if I could select the items that I want to recycle. So say if I have like, a napkin takeaway container, and cutlery if I can hit all three and then hit like, Okay, and then it's sorted at the end, rather than going through and doing everything individually, because then I'd be standing at the bid for so long, and like people would be waiting behind me. Yeah, yeah. So like, if I go like, disposable cup. And I have to go recycle more where it's like, I just clicked three things. And then and then it tells me which been put in then that would be quicker.

Khavveer Narsai

If this was in a food court, do you think you would use it?

Drita

I would use it no matter what because I think it's a good idea to recycle.

Khavveer Narsai

Yeah. And how do you feel about the whole process of stuff?

Drita

It's good to totally like what category it goes into. But

I just feel like it could be a quick process because people would just be like, they would be like, this is too hard so I don't want to do it. Yeah.

Khavveer Narsai

Do you think? So there's no like pretty colors or anything else like that.

Drita

Yeah,

Khavveer Narsai

but do you think would benefit of being a little more interactive and fun?

Drita

Yeah, definitely. If it looks more inviting people would more likely go over to it and check it out.

Khaveer Narsai

Um, the idea of when you go to the last screen looks like deciding

here where it says View the tree and play the game. Yeah, the game is just sort of like a trivia based game. So there's been multiple spins on multiple screens in the bin. And you can still use the beans without having to use the screens as well. So for the guys who want to get a bit more information, they can play a trivia game or other types of games to provide information to them.

Drita

Okay. Can you You know which bin it's meant to go into you have to use the screen or can you just use the bin

Khaveer Narsai

you just use the bins.

Drita

Okay, well that's good.

Khaveer Narsai

Yeah. So our whole idea is we're aiming to teach people who so we render most people opening to a site that isn't sure how to or what to put in which ways and what to separate and this and that. So the whole idea is to teach them the methods and give them the potential and then change behavior sort of thing so they can take this home with them or they can at work they know what to do to take off parts and stuff. Yeah.

Anything else you think would be worthwhile changing? Something you like a lot

Drita

um,

Khaveer Narsai

something you would

like to see

Drita

I guess just a more fun design, like more colors and stuff, but obviously it's not finished. So yeah,

Khav eer Narsai

yeah. Good. Thank you. Thank you.
